

# Environmental Policy

At JKL Solutions we are committed to the care of the environment, prevention of pollution and efficient use of natural resources. We will identify, quantify and continually improve the environmental impact of the company.

The environment and JKL's impact upon it is something that we all take very seriously. We demand that our supply chain feels the same way, and it is with this combined effort from all parties that we ensure a successful approach.

We will

- Provide clear information to our customers to allow identification of environmentally friendly alternatives
- Promote an extensive range of environmentally friendly products, ranging from paper to pencils. Green products tend to have long lives and are re-usable, thereby offering good cost savings to businesses.
- Minimise waste production and wherever possible recycle waste. Maximise energy efficiency and use of natural resources, including packaging and transport.
- Identify, quantify, and continually improve the environmental impact of the company using improvement programmes, demonstrated by measures and targets under continual review.

To prove our commitment, management systems are implemented to meet the requirements of ISO14001: 2004. As a minimum the company will comply with all relevant legislation, customer or other identified requirements.

This policy is published via the website, is available on request and is communicated to all employees.

The systems defined have our active full support. They are under continual review and improvement, however once defined are mandatory for all personnel.
